

# Best location for a car rental agency in Paris

# Business problem

- ▶ Paris being a city where relatively few people possess a car (due to excessive taxes and parking fees). So a car rental agency can be a juicy business because a lot of residents may need occasionally a car
- ▶ For this project let's put ourselves in the shoes of an entrepreneur looking to open a car rental agency. So for the location we have to find a balance between the real estate prices and the presence of competitors.

# Data Description

To solve this problem we will use the following data :

- ▶ An excel file (Arrondissements\_Paris.xlsx) downloaded from "Open platform for French public data" containing the list of all the Paris districts with their coordinates. [1]
- ▶ Foursquare API to get the car rental agencies for each district [2]
- ▶ The real estate prices for all Paris districts [3]

100

# Data set & method selection

- ▶ After some processing we obtain the following data set
- ▶ We used unsupervised learning K-means algorithm to cluster the districts because the data is unlabeled
- ▶ We applied K-means algorithm on the two last columns after normalizing them

PostalCode	District_Number	District_Name	Latitude	Longitude	average housing price	Car_rental_agencies
75001	1	Louvre	48.862563	2.336443	12840	17
75002	2	Bourse	48.868279	2.342803	11250	11
75003	3	Temple	48.862872	2.360001	12260	11
75004	4	Hôtel-de-Ville	48.854341	2.357630	12790	13
75005	5	Panthéon	48.844443	2.350715	12140	12

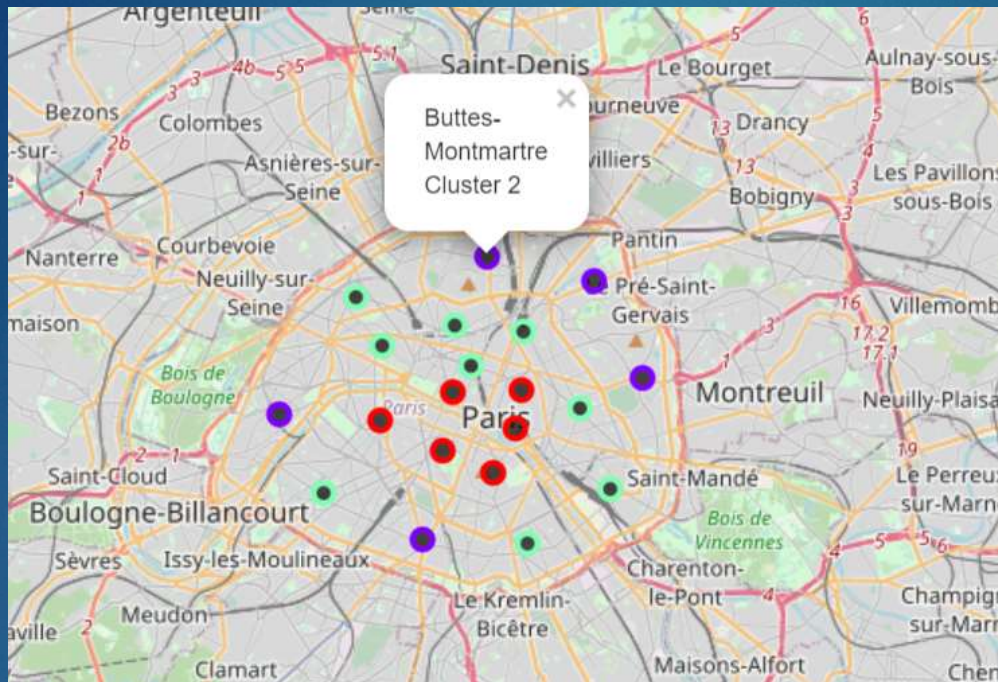

# Clustering Paris districts with Kmeans method

- In the plot above the elbow is at  $k=3$  indicating the optimal  $k$  for this dataset is 3

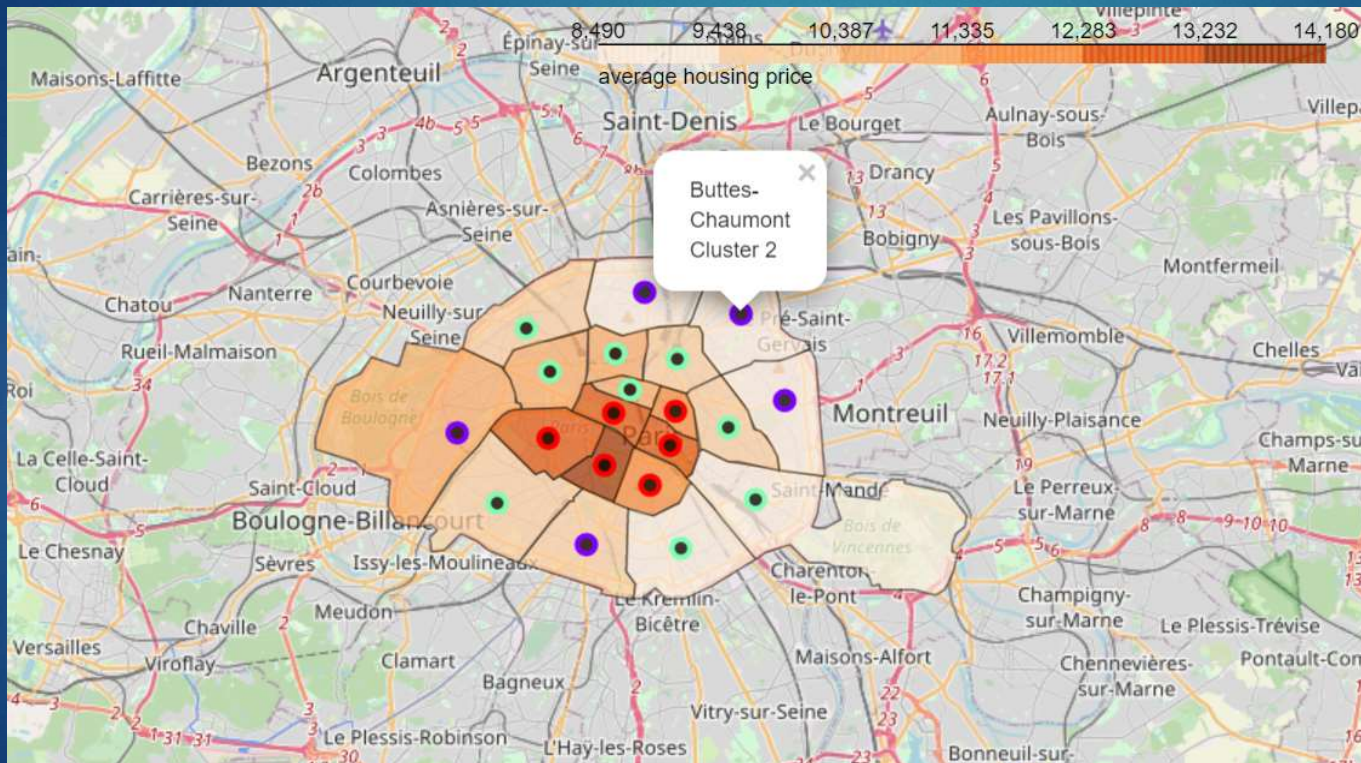

# Results : Clusters visualization

We can label the clusters as follows :

- ▶ Cluster 0 (green) : High number of car rental agencies and low housing prices
- ▶ Cluster 1 (red) : High number of car rental agencies and high housing prices
- ▶ Cluster 2 (purple) : low number of car rental agencies and low housing prices

# Results : clusters visualization with choropleth for housing prices

- We use choropleth map to better catch the level of variability and the contrast within paris

# Discussion/conclusion

- ▶ It would be better chose to open a rental car agency in the districts labeled as cluster 2 (low number of car rental agencies and low housing prices)
- ▶ That is to say in one of the following districts : "Buttes-Montmartre", "Buttes-Chaumont", "Ménilmontant", "Passy" or "Observatoire"
- ▶ But the final decision has to take into account some more factors such as the road traffic and the availability of building lands.
